

Job Description

Intermediate Software Developer

Company Overview

At Liberty Fox Technologies, we provide software solutions and recommendations that improve our client's business every day. We provide technology solutions that fit them, not us. We ask questions like, "what hurts," and "what can we do to make it better." To that end, there's a little bit of CTO in all of us in that we don't try to fit a square peg in a round hole. We base our design decisions on a client's business and budget, not just the technology we use to build it. Some clients hand out a book of instructions that tell a software developer exactly what to do. We specialize in working with them to write the book, publish it, and make sure it doesn't sit on a shelf gathering dust.

LFT leverages extensive analytics, automation, and cloud technologies to create customized software applications for EMR, CRM, and business intelligence processes. We are nationally renowned for our work with blockchain and our revenue cycle management applications provide innovative and streamlined end-to-end automated workflow solutions. As a member of the GPMF Holdings family of companies, we partner with some of the brightest IT minds on the planet to make information technology work for our customers, not the other way around.

That's what we do. Read on for how you might fit in.

Role Title

Intermediate Software Developer

Location

Greater Philadelphia, Pennsylvania

Role Description

Working with other members of our development team, you'll estimate, develop, and test enterprise applications using agile development cycles. Flexibility is key as you'll work on exciting projects using a variety of technology stacks. If you're a team player, passionate about learning and expanding your skill sets, and focused on new technologies and code bases, keep reading.
